

DIPAK SUMESARA

Senior Software Engineer — Full-Stack (Backend-Heavy)

Node.js · NestJS · React · TypeScript · AWS

Ahmedabad, India · Remote (EST overlap, open to relocation)

dipakbsumesara@gmail.com · +91-9662184977 · [GitHub](#) · [LinkedIn](#) · [Portfolio](#)

SUMMARY

Backend-heavy full-stack engineer with 8+ years designing and shipping scalable systems end-to-end. Spent 3 years as architect and lead for a US enterprise SaaS platform — owning system design, building the backend, leading the team, and contributing to the React frontend — where I cut API response times from seconds to milliseconds. Contributed to a quality-first Singapore government health platform enforcing 90% test-coverage gates and pixel-perfect design QA, and built the real-time backend for a fantasy-sports app serving 100K+ concurrent users at peak. Comfortable across the full stack and time zones; daily user of AI-assisted development tools, with hands-on experience building AI agents and LLM-integrated systems.

TECHNICAL SKILLS

- **Backend:** Node.js, NestJS, TypeScript, GraphQL, REST APIs
- **Frontend:** React (Vite), Redux Toolkit, Context API, React Hooks, Tailwind CSS, Material UI, Ant Design, performance optimization (lazy loading, infinite scroll, code splitting); Angular, Ionic
- **Architecture:** System Design, Microservices, Event-Driven, API Gateway, Pub/Sub, Queues (SQS/DLQ), Caching Strategies, Real-Time (WebSockets), High-Concurrency, Fault-Tolerant Design
- **Databases:** MongoDB, PostgreSQL, MySQL, Redis (caching, sessions), Elasticsearch
- **Cloud & DevOps:** AWS (Lambda, API Gateway, SQS, S3, CloudFront/CDN), Docker (containerized services & deploys), CI/CD
- **Security:** Authentication & Authorization, session management, secure API design, centralized auth (API Gateway + Lambda)
- **Observability & Testing:** Logging, monitoring, error handling, performance profiling; Jest (unit & integration, backend & frontend), high test-coverage gates
- **AI Engineering:** Anthropic Claude API integration, AI agent development in Node.js/TypeScript, tool/function calling, multi-step agent orchestration, retrieval-augmented generation (RAG), prompt engineering, context management, structured output validation, streaming responses
- **AI Dev Tools:** GitHub Copilot, Cursor, Claude Code, OpenAI Codex

PROFESSIONAL EXPERIENCE

Senior Backend Engineer / Platform Lead

SwagUp (via Extendime) | Mar 2023 – Apr 2026

Remote · US Timezone Collaboration (EST/CST)

Aloha — Enterprise Admin & Operations Platform

- Architect and lead for a B2B enterprise operations platform (vendor, distributor, admin workflows) — owned system design, built the backend, led the team, and contributed to the React frontend, working alongside US product and engineering teams.
- Cut API response times from seconds to milliseconds via Redis caching, query optimization, and database indexing.
- Built backend microservices behind an API Gateway pattern with centralized authentication, authorization, and session management on AWS Lambda.
- Implemented a reliable Node-to-Salesforce data sync using AWS SQS with a dead-letter queue (DLQ) for guaranteed delivery and error handling.
- Designed fault-tolerant, event-driven flows with pub/sub and SQS queuing, backed by robust retry and observability patterns.
- Built Elasticsearch-backed search for ~20K products with custom indexing pipelines; the core challenge was keeping the index reliably in sync with the source data.
- Containerized services with Docker — maintaining Dockerfiles for build steps and versioning — and ran deployments through the same pipeline; served assets via S3 and CloudFront CDN.
- Owned CI/CD pipelines, branching strategy, and release workflows, including off-hour production deploys under high-availability SLAs.
- Established Jest test automation and code-review standards across the platform.

SwagUp.com — Customer-Facing Platform

- Built REST and GraphQL APIs and the React frontend for order tracking and a multi-tier pricing engine with dynamic discount logic and real-time quote generation.

Software Engineer / Backend Lead

CoffeeBeans Consulting | Jun 2021 – Mar 2023

Remote

Health Promotion Board (Healthy 365) — Singapore Government Health Platform

- Built backend systems (Node.js) for a high-quality-bar citizen health application (React frontend), delivered by a 10-person cross-functional team under a rigorous engineering process.
- Worked within a strict quality pipeline: mandatory kickoff calls with QA and design before development, pair programming, dual QA (pixel-level design QA against Figma, then functional QA), and staged Dev → QA → UAT → Production promotion.
- Met enforced quality gates: 90% minimum unit-test coverage (commits blocked below threshold), strict ESLint rules, and standardized commit conventions — build/commit failed on any violation.

Salam Kisan — Agritech Platform

- Owned backend architecture on Strapi CMS; built REST APIs and automated data-sync workflows for an agri-supply-chain platform, including Open edX integration for learning content.
- Led a 3-engineer backend team across sprint delivery, code quality, and production support.

Software Engineer

Yudiz Solutions | May 2020 – May 2021

Ahmedabad, India

11Wickets — Fantasy Sports Platform (Dream11 competitor)

- Built real-time backend features for a platform serving 100K+ concurrent users at peak match load: live score updates over WebSockets and Redis caching to sustain high-concurrency read traffic.
- Implemented full-stack WebSocket-based live chat (frontend and backend) for real-time user engagement during matches.
- Led a React UX overhaul: migrated to functional components with Hooks, added lazy loading, infinite scroll, and optimized state management.
- Mentored junior developers.

Software Engineer

Biztech Consulting & Solutions | Jan 2019 – Mar 2020

Ahmedabad, India

- Proposed and led a v2.0 overhaul, migrating from legacy Angular to a modern, modular architecture with clean design patterns and secure API integrations — adopted by the founding team.
- Rebuilt the product from the ground up, splitting the feature set into modules to enable a tiered pricing model (Professional, Ultimate, and Custom — pick-your-own feature set), replacing the previous all-or-nothing model and driving significant customer growth.
- Built a Fabric.js product designer with live 2D preview and Three.js 3D preview for real-time customization.

Software Engineer (Intern → Full-Time)

Angular Minds | Dec 2017 – Sep 2018

Pune (Baner), India

Numnu — Food Event & Fair Discovery App

- Built a food-event and fair discovery app (Angular, Ionic) that surfaces local food events and trending dishes by proximity and date range.
- Delivered an interactive event-guide mode used at large events (e.g., Royal Manitoba Winter Fair) for schedules, maps, vendor discovery, and guest reviews, plus a photo-rich review pipeline with pricing and timelines.

EDUCATION

Master of Computer Applications (MCA) — Pune University, 2018
